

Ensuring ATM Cyber Security by Applying SecRAM

“The digital transformation of aviation is posing a risk if cyber security is not properly addressed already during the R&D phase”

What is SecRAM?

A security risk assessment is a process for identifying and mitigating potential attacks against a system. The Security Risk Assessment methodology (SecRAM) used for SESAR 2020 provides a methodology and practical guidance for the SESAR projects to perform a cyber security risk assessment of their solutions. SecRAM presents a line of actions for demonstrating that a SESAR solution has adequately addressed cyber security in their research and development phase, thus ensuring that the outcome is a resilient solution.

The SecRAM Methodology

Karin Bernsmed (karin.bernsmed@sintef.no) – Guillaume Bour (guillaume.bour@sintef.no) – Patrice Wakam Nzukou (patrice.nzukou-wakam@eurocontrol.int) – Denisa Osmani (denisa.osmani@eurocontrol.int) – Alessandra Tedeschi (alessandra.tedeschi@dblue.it)

This project has received funding from the SESAR JU under the EU H2020 research and innovation programme under grant agreement 731765

2 – 6 December 2019 Athens, Greece
